

## HAIDA – CLEAR NIGHT “light-pollution” filters

Optical “Light pollution” is a common problem for nightscape photographers. Haida have created a solution – CLEAR NIGHT filter.

Anywhere at night, optical “Light pollution” has the potential to make an image less appealing. Every now and then an image can show an “orange” color cast that is unfavorable to the captured image.

Haida Filters announce their latest addition the CLEAR NIGHT filter range which removes this light pollution. Some Streetlights of mercury vapor sodium and CRI emit undesirable wavelengths of light that react with the particles in the air creating light pollution. This can reduce the camera’s ability to capture a night sky image clearly. Fitting a Haida CLEAR NIGHT filter greatly reduces the light pollution problem and is an essential tool for a night photographer.

Haida Clear Night filters are optically superior glass filters made to the strictest standards. The Clear Night features Haida NANO PRO multi coating for superior image low color cast results and resistant to scratches, oil, fingerprints and water.

### Haida Clear Night Filters are available for:

- Square Glass Insert filter systems - 75PRO, 100PRO and the 150 super wide angle systems
- Also, available in Round filter sizes: 52, 55, 58, 62, 67, 72, 77, 82 mm
