

# Offroad Pole With GoPro Mount

## Capture The Action Like Never Before

The Offroad Stunt Poles for GoPro® is a brand new pole designed to meet the needs of action camera users wanting to capture their adventures like never before and truly share the excitement of all their extreme sports experiences.

The Offroad Stunt Poles are made of a special resin to which glass fiber has been applied for the first time in a Manfrotto product and in an action camera pole. This new, high-performance material guarantees maximum lightness while being extremely solid and rigid. It is very compact and ideal for use in all action situations. The Offroad Stunt Poles function in a way that resembles the fishing rod: its tubes are conic and open/close telescopically and are extremely fast to set up. They are adjustable at different lengths with no need for bulky locking levers.

The Offroad Stunt Pole comes with a GoPro® adaptor completely made of plastic and compatible with all GoPro® camera models. It features a universal female thread at the bottom making it compatible with any support: you can remove it from the pole by simply unscrewing it and use it in all kinds of situations.

Thanks to the universal 1/4" attachment on top of the pole, accessories can be changed quickly and easily.

- Ultra lightweight action camera pole
- GoPro tripod adaptor with 1/4 thread attachment included
- Made of a new resin with glass fiber for maximum lightness
- Easy and fast to set up
- Comfortable handgrip and wrist strap for maximum safety
