

XPRO Geared 3 Way Head

WITH ADAPTO BODY

For passionate photographers looking for portable supports with extremely precise framing control.

Quick Release

3-Way Precision

Fine Adjustments

Lightweight – Adapto Technopolymer Body

This head by Manfrotto weighs only 0.75 kg, but can support a payload of up to 4 kg. Its Adapto body - a strong, rigid technopolymer- makes this head the lightest and most precise ever created by Manfrotto.

Framing and composition – Micrometric Knobs

The geared movement allows users to frame images precisely - one micro step at a time - on all three axes. The knobs ensure ergonomic comfort even during extensive usage. In addition, in order to make large framing adjustments, the locking system can simply be loosened by pushing the knob against the levers. Geared technology by Manfrotto is patent pending.

Convenience - 200PL Plate

The XPRO Geared head features the most common photographic plate in the world so there's no need to use different plates when switching to other Manfrotto supports. All in one lightweight photographic plate.

attachment	3/8" female thread attachment type
bubble spirit level (no.)	2 number
colour	black
front tilt	-20° / +90° tilt range
lateral tilt	-90° / +30° tilt range
