

Strato™ II Multi

2.4GHz 5 in 1 Wireless
Trigger System

PH15651 Canon Set
PH15653 Nikon Set
PH15656 Canon Receiver
PH15657 Nikon Receiver

The Strato II Multi 5-in-1 Wireless Trigger - a powerful addition to the Phottix line-up of wireless flash triggers and shutter releases.

The Strato II Multi offers four groups (A, B, C and D) and extended range to the already impressive functions of the original Phottix Strato. Four groups combined with four wireless channels allow photographers an incredible amount of control on location or in the studio.

Main Features:

4 groups: A, B, C, D

4 Channels

Approx 150m

1/250 sec Sync Speed*

Flash wake up functions

Hot shoe / Studio strobe triggering

Wired and wireless shutter release functions

Pass through hot shoe and on camera flash TTL functions

Compatible with Phottix Strato 4 in 1 Wireless Triggers and Atlas II Trigger.

And best of all: The Strato II Multi is compatible with original Phottix Strato receivers and Atlas II transceivers. **That's right, it's backwards compatible.** The Strato II Multi can be used as a flash trigger, or wired/wireless shutter release. Set up four or more cameras and take photos from multiple vantage points from one location. Great for sporting or other special events.

These transmitters continue to feature the innovative TTL pass-through hot shoe - allowing full TTL mode to be used with a camera mounted flash. Receivers offer flash wake-up functions.

The Phottix Strato II Multi is fast and powerful. Since its release the Strato series has become the trigger of choice for wedding and event photographers.
