

## Multi Boom

41cm / 16in mount  
up to 2 flash guns

PH87520

The compact Phottix Multi Boom 16" Flash Bracket mounts into a standard umbrella swivel, holds two flashes on axis, and innovatively enables umbrella-style Softboxes to be tilted.

Umbrella-style Softboxes from Phottix and other manufacturers are great lighting modifiers. Easy to transport and use, fast to set-up – but there's one big drawback: Because of the design they are almost impossible to tilt on a traditional light stand.

Phottix has realized this flaw and overcome it. Introducing the Phottix Multi Boom. The compact Multi Boom mounts in a standard umbrella swivel, holds two flashes on axis with the umbrella shaft, and allows the Softbox to be tilted.

The compact Phottix Multi Boom 16" Flash Bracket mounts into a standard umbrella swivel, holds two flashes on axis with an umbrella or umbrella-style Softbox., it allows for umbrella-style Softboxes to be tilted.

### Other features:

- Mount one or more flashes with the heads centred inside umbrellas or Phottix Easy-Up Umbrella Softboxes, or Premio umbrella-style for more even light output.
- Place the umbrella swivel outside umbrella-style Softbox, allowing much greater tilt angles and fast easy access to the swivel handle. Mount in an umbrella swivel, or in a grip head for tilt and swivel movement.
- Allows full 180-degree tilt with Phottix Easy-Up Umbrella Softboxes, up to 90 cm (of 36") in height or diameter. Fast and easy set-up, base plate swivels and locks into position with one simple thumbscrew.
- Quickly folds flat and compact for transport. Carrying bag included.
- Mount the baseplate in multiple positions for different flash layouts, or lower centre of gravity.
- The hand grip allows for holding of flashes mounted in a shoot-through umbrella or similar modifier.
- Large, easy-to grip-thumbscrews are captured in the slots – no worries of lost thumbscrews.
- Folded flat the bracket acts as a base stand for 2 flashes to sit on a flat surface (floor or table etc).
- Solid all metal construction is simple, strong and long lasting with lightweight 6061 machined alloy materials, with hard wearing black anodized finish.
- Upright flash mounting is ideal for hot shoe mounted radio triggers.
- The eye bolt handle grip provides easy access to a handle outside the Softbox, as well as a point to attach battery packs or small counterweights.
- Using the base plate from a second Multi-Boom bracket allows for quad flash mounting, or two flash units and 2 battery packs.
- Please Note - for larger tilt angles with multiple flash units mounted, sandbags should be used on light stand base. Safety first – always use sandbags. For lightweight stands, or when there may be any possible stability issues, the flashes can also be mounted near the base of the Multi-Boom bracket. Like the regular umbrella swivel mounting position, though still allowing full tilt of the Softbox.
