

SK-SW02N

Steady Cam Medium Pro

The Sevenoak stabilizer SK-SW02N is a lightweight hand-held camera stabilizer system designed for DSLR cameras weighing up to 3KG. This stabiliser is incredibly smooth, graceful and steady.

The camera platform moves back and forth and side to side, to quickly allow adjustment of the camera's horizontal balance.

Adjust the camera's vertical balance by varying the amount of counterweight disks on the base platform.

When balanced properly the camera floats, always balanced, isolated from your hands undesirable motions and ready to move with the action.

Features:

- Fine adjustment Camera Balance Platform with scale markings
- Integrated quick-release Camera Plate
- Adjustable convergence, precision, three axis gimbal
- Adjustable dynamic balance and inertial control Base Platform
- Min height: 42.5cm
- Max height: 59cm
- Product weight: 2.58 KG
- Max load capacity: 3KG

Important notice: Upgraded and lighter than previous version, with rubber mat, scale marks on the camera mounting plate, more flexible hand grip and lockable centre post.
