

Care and Handling of Background Paper Rolls

It is important to realise that all papers whatever brand will be affected by humidity and also possible poor storage/handling by dealers and end consumers

Rolls should be preferable stored horizontally, if vertical then a secure racking system should be employed

Rolls should be stored to avoid excessive humidity and rapid air temp/moisture changes

Rolls should be tightly re-wound after use , or the used section removed and disposed of, especially if subject to damp conditions

The second matter, Humidity, is not so easy to control

Some Studios are aware of this and use vinyl and muslin, avoiding these paper issues

Those that use Background paper are usually able to structure lighting to avoid exposure of these “ripples” in the final image

Unfortunately, this matter is a fact for ALL brands of Paper backgrounds and NOT a specific fault as such that ONLY happens to Superior Brand Background Paper
